                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          quality sequence stop: 449.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              from 2 week old seedlings with the cotyledons removed at the time of harvest. The seedlings for the cultivar Raiden were grown in a growth chamber using germination paper. Complementary DNA was synthesized from mRNA using a primer consisting of a poly(dT) sequence with a XhoI restriction site. EcoRI adapters were ligated to the blunt-ended cDNA fragments followed by XhoI digestion. The cDNA fragments were directionally cloned into the EcoRI-XhoI restriction site of the pBluescript vector. The ligated cDNA fragments were transformed into DH10B host cells (Gibco BRL). This

The present invention describes primer sets for synthesising 5602 CC full-length cDNAs defined in the specification. Where a primer set comprises: (a) an oligo-dT primer and an oligonucleotide comprises one of the 5602 nucleotide sequences defined in the specification, where the coligonucleotide comprises at least 15 nucleotides; or (b) a combination of an oligonucleotide comprises as sequence complementary to the complementary strand of a polynucleotide which comprises a 5'-end complementary strand of a polynucleotide which comprises a 5'-end complementary to a sequence complementary to a sequence complementary to a polynucleotide which comprises a 3'-end sequence complementary to a coligonucleotide which comprises a 3'-end sequence complementary to a polynucleotide which comprises a 3'-end sequence, where the coligonucleotide comprises a 3'-end sequence, where the specification. The primers set useful for synthesising polynucleotides in gene therapy. The primers are useful for synthesising polynucleotides, comparisonally full-length cDNAs. The primers are also useful for the capacition and/or diagnosis of the abnormality of the proteins encoded by the full-length cDNAs. The primers also wobtaining of the full-length cDNAs. The primers also wobtaining of the full-length cDNAs easily without any specialised methods. AAH33168 to AAH3628 and CC AAH35833 to AAH38742 represent human capacities; and AAH33629 to AAH3633 co represent oligonucleotides, all of which are used in the exemplification of the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  29-JUL-1999;

antiinflammatory; antibacterial; antiviral; antifungal; antirheumatic; antithyroid; and antianaemic. The sequences can be used for determining the presence of or predisposition to, or preventing or treating pathological conditions associated with an OREX-associated disorder. The nucleic acids can be used to express OREX proteins in gene therapy vectors. The proteins and nucleic acids may be used to treat cancers, proliferative disorders, neurodegenerative disorders, osteoarthritis, praft vs host disease, cardiovascular disease, diabetes mellitus, hypertension, hypothyroidism, cholesterol ester storage, systemic lupus artificiants.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         31-MAR-1999;

        The invention relates to human nucleic acids (AAI57798-AAI61369) and the encoded polypeptides (AAM38642-AAM42213) with nootropic, immunosuppressant and cytostatic activity. The polynucleotides are useful in gene therapy. A composition containing a polypeptide or polynucleotide of the invention may be used to treat diseases of the peripheral nervous

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  to CCYPR may be used in enzyme-linked immunosorbent assays (ELISA) or radioimmunosasys to detect CCYPR. CCYPR itself may be used to detect Ccompounds e.g., antibodies, oligonucleotides and proteins (receptors) that specifically bind to CCYPR, and in drug screening methods to Cidentify compounds that modulate the activity of CCYPR. CCYPR compounds that modulate the activity of CCYPR. CCYPR concleotides can be used to generate transgenic animal models of human concleotides and can be used in gene therapy in target cells with genetic abnormalities with respect to the expression of CCYPR for the creatment or prevention of a disorder associated with CCYPR. CCYPR concleotides with can be diagnosed, treated and prevented using CCYPR proteins, nucleic acids, agonists or antagonists include immune, concertions, nucleic acids, agonists or antagonists and cell proliferative disorders including cancer. Specific examples of these disorders include anaemia, aphileps, arteriosclerosis, asthma, cancer, allergies, alterators of the menetry and infertions.

CC AAY04293 to AAY04321 represent the secreted proteins encoded by the 29 CC human genes. The genes and their corresponding secreted polypeptides are useful for preventing, treating or ameliorating medical conditions, ce e.g. by protein or gene therapy. Also pathological conditions can be CC diagnosed by determining the amount of the new polypeptides in a sample CC or by determining the presence of mutations in the new genes. Specific uses are described for each of the 29 genes, based on which tissues they CC diagnosis or treatment of cancer, tumours, developing products for the CC diagnosis or treatment of cancer, tumours, developmental abnormalities CC and foetal deficiencies, blood disorders, diseases of the immune system, CC disorders, schizophrenia, arthritis, asthma, psoriasis, sepsis, skin CC disorders, digestive/endocrine disorders, infections and AIDS. The polypeptides are also useful for identifying their binding partners. The sequences given in AAX30174 to AAX30182 and AAX904334 are
                                                                                                                                                                                             Align seg 1/1

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The present sequence represents a human transcriptional regulatory factor containing a bromo domain. The factor interacts with proteins involved in the chromatin-mediated transcription regulatory mechanism. It binds to hswr2H, hswr2L and NCOA-62/SKip. It can be used for screening compounds binding to it and acting as agonists or antagonists, which are potentially useful for the treatment and prevention of cancer and

                                                                                                                                                                                                                                                                                                                                                          dermatological; neuroprotective; cardiant; thrombolytic; coagulant; nootropic; vasotropic; antipsoriatic and antiangiogenic. The polynucleotides and polypeptides can be used for preventing, treating or ameliorating medical conditions and diagnosing pathological conditions. Polynucleotides, polypeptides, antibodies, agonists and antagonists from the present invention may be used to treat immune disorders by activating or inhibiting the proliferation, differentiation or mobilisation of immune cells, to treat disorders of haematopoietic cells, autoimmune disorders, altergic reactions, graft versus host disease and organ rejection, modulate haemostatic or thrombolytic activity, modulate inflammation, cancers, cardiovascular disorders, neurological disease and bacterial or viral infections. The peptides, nucleotides, antibodies, agonists and antagonists may be also be used in the exemplification of the cardiovascular disorders and pathological disease and hab44240 represent sequences used in the exemplification of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           AAC//bU/ to AAC/8448 encode the human cancer associated proteins gi
in AAB43398 to AAB44239. The proteins can have activities based on
tissues and cells the genes are expressed in. Example of activities
                                                                                                                                                                                                                                                                                                         Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  antiinflammatory; antithyroid; antiallergic; antibacterial; antiviral;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         include: cytostatic; proliferative; vulnerary; immunomodulator;
antidiabetic; antiasthmatic; antirheumatic; antiarthritic;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                AAC77607 to AAC78448 ence

             The invention provides nucleic acids encoding the human and murime inducer-obliterator 1 (DIO-1) polypeptides. The polypeptides can be expressed by standard recombinant methodology. The DIO-1 polypeptides, agonists and antagonists are used as medicament for treating diseases characterized by an alteration in cell death or by hyperproliferation, e.g. cancer, autoimmune diseases, diabetes, rheumatoid arthritis, benign tumours, malignant tumours or hyperproliferative skin disorders. They are also useful in the treatment of metabolic, proliferative or inflammatory also useful in the treatment of represents the human DIO-1 polypeptide.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            _documentation_block:

CC complementary
The present invention describes primer sets for synthesising 5602 CC full-length cDNAs defined in the specification. Where a primer set CC comprises: (a) an oligo-dT primer and an oligonucleotide complementary to the complementary strand of a polynucleotide which comprises one of CC cliponucleotide sequences defined in the specification, where the CC oligonucleotide comprises at least 15 nucleotides; or (b) a combination CC of an oligonucleotide comprising a sequence complementary to the CC complementary strand of a polynucleotide which comprises a 5'-end CC sequence and an oligonucleotide comprising a sequence complementary to a CC polynucleotide which comprises a 3'-end sequence complementary to a CC oligonucleotide comprises at least 15 nucleotides and the combination of CC the 5'-end sequence', '-end sequen
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               alignment_block:

The polypeptides can be expressed by standard recombinant methodology. The DIO-1 polypeptides, agonists and antagonists are used as a medicament for treating disease characterized by an alteration in cell death or by hyperproliferation, e.g. cancer, autoimnune diseases, diabetes, rheumatoid arthritis, beni

The amino acid sequence is deduced from a cDNA sequence (see AAV28112) derived from overlapping clones from a rat kidney cDNA library. The invention is directed toward isolated nucleic acid molecules encoding mammalian 5-oxoprolinase (m50P). Deficiency of this enzyme is associated with 5-oxoprolinuria. Expression vectors and host cells comprising the nucleic acid molecules are provided, as well as methods of increasing (by gene therapy) or decreasing (e.g. using antisense or ribozyme molecules) the expression of m50P in host cells. The invention also provides a method of screening a substance for its ability to modify m50P function, and a method for isolating other m50P molecules. DNA probes and primers, and antibodies specific for m50P are provided, each of which can be used to detect the

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    of huntingtin into brain cell membranes. Its amino acid sequence was deduced from a human frontal cortex cDNA clone (AAT67187). The effects of HD in a patient expressing huntingtin protein with an expanded polyglutamine tract can be ameliorated by increasing the amount of expressed HIPI in the brain using gene therapy approaches. Modified forms of HIPI which bind more effectively to expanded HD protein can be used to convert the expanded protein
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 119

Proteins with DED (referred as HIP-apoptosis modulating proteins) are useful for inducing apoptotic death in cells. The HIP is a logical target for therapy in Huntington's disease since it has a differential apoptotic activity, modulated by interaction with Huntingtin having normal and activity, modulated by interaction with Huntingtin having normal and
                                                                                                                                                             17-APR-2000
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       expanded repeats. HIP is also used as a therapeutic agent to introduce apoptosis in cancer cells. Increasing expression of normal (non-expanded) Huntingtin or the HIP-apoptotic modulator-binding portion, a modified HIP-apoptotic modulator in which the DED has been deleted, is helpful for

Proteins with DED (referred as HIP-apoptosis modulating proteins) are useful for inducing apoptotic death in cells. The HIP is a logical target for therapy in Huntington's disease since it has a differential apoptotic activity, modulated by interaction with Huntingtin having normal and expanded repeats. HIP is also used as a therapeutic agent to introduce apoptosis in cancer cells. Increasing expression of normal (non-expanded)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   (UYBR-)

```
cc 19 genes, based on the tissues in which they are most highly expressed, cand include developing products for the diagnosis or treatment of proliferative disorders, cancer, tumours, foetal and developmental control proliferative disorders, cancer, tumours, foetal and developmental control proliferative disorders, diseases of the immune system, although autoimmune diseases (e.g., rheumatoid arthritis), inflammation, callergies, neurological disorders, although arthritis), inflammation, callergies, neurological disorders, schizophrenia, asthma, skin disorders (e.g., psoriasis), sepsis, diabetes, atherosclerosis, cardiovascular disorders, angiogenic disorders, atherosclerosis, cardiovascular disorders, angiogenic disorders, kidney disorders, candiovascular disorders, pregnancy related disorders, endocrine disorders, and infections. The proteins can also be used to aid wound healing and epithelial cell proliferation, to prevent skin aging due to sunburn, to maintain organs before transplantation, for supporting cell culture of primary tissues, to regenerate tissues, to identify their cognate ligands or binding partners, and in chemotaxis, and can be used as a food additive or preservative to modify storage properties.

Antibodies specific for a protein of the invention can be used in a disparent of temperature of primary and with the disorders mentioned above, and
                                                                                                                                                                                                                                                                                                                                                 and inc
                                                                                                                                                                                                                                                                                                                                                                                            The genes and their secreted proteins are useful for preventing, treating or ameliorating medical conditions, e.g., by protein or gene therapy. Pathological conditions can be diagnosed by determining the amount of the new protein in a sample or by determining the presence of mutations in the new genes. Specific uses are described for each of the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            skin disorder; psoriasis; sepsis; diabetes; atherosclerosis; cardiovascular disorder; angiogenic disorder; kidney disorder; gastrointestinal disorder; pregnancy-related disorder; endocrine disorder; infection; wound healing; vulnerary; cell culture; chemotaxis; food additive; gene therapy;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           AAD07705-AAD07759 represent cDNAs corresponding to 19 human secreted protein genes, and AAE03292-AAE03346 represent the proteins they encode. AAE03347-AAE03375 represent human secreted protein fragments or variants
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               preventing, treating or amelioral Parkinson's diseases and cancers

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 skin disorders (e.g., psoriasis), sepsis, diabetes, atherosclerosis, cardiovascular disorders, anglogenic disorders, kidney disorders, gastrointestinal disorders, pregnancy-related disorders, endocrine disorders, and infections. The proteins can also be used to aid wound healing and epithelial cell proliferation, to prevent skin aging due to sunburn, to maintain organs before transplantation, for supporting cell culture of primary tissues, to regenerate tissues, to identify their cognate ligands or binding partners, and in chemotaxis, and can be used as a food additive or preservative to modify storage properties. Antibodies specific for a protein of the invention can be used in diagnostic immunoassays e.g., radioimmunoassay or enzyme linked immunosorbent assay (ELISA). The present sequence represents a human
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             amount of the new protein in a sample or by determining the presence of mutations in the new genes. Specific uses are described for each of the 19 genes, based on the tissues in which they are most highly expressed, and include developing products for the diagnosis or treatment of proliferative disorders, cancer, tumours, foetal and developmental abnormalities, hammatogicatic disorders, diseases of the immune system, AIDS, autoimmune diseases (e.g., rheumatogic arthritis), inflammation,

                                                                                                                                                                                                                                                                                                                                                                                                                This sequence is encoded by an extended human secreted protein coding sequence of the invention. The secreted proteins can be used in treating or controlling a variety of human conditions. The secreted proteins may act as cytokines or may affect cellular proliferation or differentiation or may act as immune system regulators, haematopoiesis regulators, tissue growth regulators, regulators of reproductive hormones or cell movement or have chamatopoiesis.
                                                                                                                                                                                                                                                                                                             or have chemotactic/chemokinetic, receptor/ligand, anti-inflammatory or tumour inhibition activity. The DNAs can be used in forensic procedures to identify individuals or in diagnostic procedures to identify individuals having genetic diseases resulting from abnormal expression of the genes corresponding to the extended cDNAs. They are also useful for constructing a high resolution map of the human chromosomes. They can also be used for gene therapy to control or treat genetic diseases.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                          This sequence is encoaed by sequence of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      N-PSDB;

Claim 61; Fig 18; 226pp; English.

XX

The present invention describes an occupation of generation of ge CC The present invention describes an antibody that binds to a human CC protein (I) selected from: PRO381; PRO1269; PRO1410; PRO1755; PRO1790; CC PRO3434; PRO1927; PRO3567; PRO1293; PRO1293; PRO1393; PRO4344; PRO4354; CC PRO4397; PRO4079; PRO1555; PRO1295; PRO1293; PRO1393; PRO4344; PRO4354; CC anticancer activity and can be used to diagnose tumours in mammals, by CC detecting complex formation when the antibody is contacted with test CC cells. Increased expression of genes encoding (I) can also be detected CC to diagnose tumours. Agents which inhibit the activity of (I), CC especially the antibodies, or an atisense oligonucleotide which CC hybridises to genes encoding (I), can be used to inhibit tumour growth, CC preferably by inducing cell death. Methods from the present invention CC can be used to identify compounds which inhibit the biological activity CC of (I). AAC58019 to AAC58102 represent PCR primers and hybridisation CC probes used in examples from the present invention for human PRO CC sequences. AAC58103 to AAC58122 and AAB24021 to AAB24040 represent human CC PRO polynucleotide and protein sequences given in the exemplification of the present invention for human PRO CC protes used in examples from the present invention for human PRO CC protes used in examples from the present invention for human PRO CC protes used in examples from the present invention for human PRO CC protein sequences given in the exemplification of the present invention for human PRO CC protein sequences given in the exemplification of the present invention for human PRO CC protein sequences given in the exemplification of the present invention for human PRO CC protein sequences given in the present invention for human PRO CC protein sequences given in the present human PRO CC protein sequences given in the exemplification of the present invention for human PRO CC protein sequences given in the present invention for human PRO CC protein sequences given in the protein sequences given in the protein sequences given in the protein s

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          seq_name:
                                        antipsoriatic; antiparkinsonian; nootropic; neuroprotective; osteopathic; anticonvulsant; antiarthritic; immunosuppressant; immunostimulant; cardiant; thrombolytic; coagulant; vasotropic; antidiabetic; hypotensive; dermatological; immunosuppressive; antitinflammatory; antibacterial; antiviral; antifungal; antirheumatic; antithyroid; and antianaemic. The sequences can be used for determining the presence of or predisposition to, or preventing or treating pathological conditions associated with an OREX-associated disorder. The nucleic acids can be used to express OREX proteins in gene therapy vectors. The proteins and nucleic acids may be used to treat cancers,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    antianaemic; gene therapy; cancer; proliferative disorder; hypertension; neurodegenerative disorder; osteoarthritts; graft vs host disease; cardiovascular disease; diabetes mellitus; hypothyroidism; SCID, AIDS; cholesterol ester storage; systemic lupus erythematosus; infection; severe combined immunodeficiency; malaria; autoimmune disorder; asthma; allergy; aplastic anaemia; nocturnal hæmoglobinuria; burn; wound; pone damage; cartilage damage; antiinflammatory disease; coagulation;
                                                                                                                                                                                                                                                                                                                                                                                                                                  AAC74446 to AAC77606 encode the proteins given in AAB40237 to AAB43397, which represent the human ORFX open reading frames 1 to 3161. The ORFX sequences have activities such as: cytostatic; hepatotropic; vulnerary;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Novel nucleic acids and peptides derived from open reading useful for treating e.g. cancers, proliferative disorders, neurodegenerative disorders and cardiovascular disease -

                                                                                                                                                                                                                                                                                                                                                                             m
```

anticancer and

This invention describes novel human nucleic acid (cDNA) sequences that are highly expressed in uterine tumour tissue and which have

cytostatic activity. (A) are used (i) for recombinant

Claim 23; Page 412; 444pp; German.

This allows a significantly longer fragment of the gene to be revealed, so should reduce the number of failures associated with the fact that ESTs from different libraries may represent different parts of the same unknown gene, distorting the estimated frequency of occurrence in a particular tissue. AAX59941-Y60328 represent protein fragments encoded by the human endometrium tumour cDNA library derived EST fragments represented in AAZ41981-Z42121.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Cytoplasmic; vaccine; prevention; treatment; infection; identification; binding compound; bacterium; life cycle; activator; bacteria; inhibitor; duodenal ulcer disease; chronic gastritis; diagnosis; envelope; ds.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            expression of polypeptides (B) and (ii) to isolate complete genes. (B) are used (1) to identify agents suitable for treatment of uterine or endometrial cancer; (ii) directly for treating these forms of cancer (including expression from gene therapy vectors) and (iii) for generation of specific antibodies. (A) are identified by assembling ESTs
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          H. pylori cell envelope transporter protein 13726562.aa
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           AAW20131 standard; Protein; 288
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    110 AAATTGAAGATAAGTATCACCTTACATGTG.....AAACTTACCAGTCA

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              transporter protein.

C transporter protein may be used in a vaccine to prevent or treat H. pylori infection or to identify H. pylori polypeptide binding compounds, infection or to identify H. pylori life cycle activators or inhibitors. C useful as potential H. pylori life cycle activators or inhibitors. The genomic sequence of H. pylori (ATCC 55679) was determined from coverlapping contigs generated by mechanically shearing the bacterial DNA. The sequences were analysed for ORF of at least 180 nucleotides, and the predicted coding regions defined by computer evaluation. To identify likely H. pylori antigens for vaccine development, the amino acid sequences predicted from various ORF were analysed for significant homology to other known or exported membrane proteins. Having identified and determined the sequences of interest, particular regions can be isolated from H. pylori by PCR amplification for recombinant polypeptide production, e.g. in E. coli hosts.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Align seg 1/1

XX

PH Helicobacter pylori nucleic acid sequences and related prolipeptide(g) - useful for vaccines to treat or prevent H. pylori prolipeptide, and to detect Helicobacter

XX

XX

This sequence represents a H. pylori transporter protein.

CC This protein may be used in a vaccine to prevent or treat H. pylori infection or to identify H. pylori polypeptide binding compounds, useful as potential H. pylori life cycle activators or inhibitors.

CC The protein may be used in a vaccine to prevent or treat H. pylori or treat H. pylori polypeptide binding compounds, useful as potential H. pylori life cycle activators or inhibitors.

CC The protein may be used find a vaccine to prevent or treat H. pylori polypeptide binding compounds, the sequence of H. pylori life cycle activators or inhibitors.

CC The protein may be used for ORR of at least 180 nucleotides, useful as potential H. pylori life cycle activators or inhibitors.

CC The protein predicted from vaccine development, the amino condition of the predicted from vaccine development, the amino condition of the sequences of interest, particular regions can be condition, e.g. in E. coli hosts.
